1 Battalion Chief  
15 Showers  
15 Lavatories  
3 Kitchen Sinks  
1 Dishwasher  
1 Break room Sink  
3 Mop Sinks  
2- Eternal hybrid GU32's

This large Fire Station / Training Center in Henderson, Nevada replaced two 100 gallon, 199,000 BTU/H tank water heaters with 2 Eternal GU32 units. According to Ray Ortega, Plumbing Specialist for the City of Henderson, "First and foremost we chose Eternal Hybrid because it has the capability to recirculate while still acting as an on-demand type heater. Secondly, the cost of Eternal Hybrid is very competitive and offers much higher efficiency that will reduce gas water-heating costs as much as 50 percent."

The new system is recirculated with a smaller pump than previously used with the 2 tank water heaters and is vented with PVC pipe instead of expensive stainless steel or dual wall venting material. With the Fire Station complete Ray says, "we plan 20 more Eternal installs throughout the City of Henderson."
